this second edition offers updated and revised information on vessel health and preservation vhp it presents a model of care and systematic application of vascular access and administration of intravenous treatment to show how establishing and maintaining a route to the bloodstream with optimal methods is essential for patients in acute care today this model concept was first published in poster form in 2008 and in jva in 2012 which has received a great deal of attention especially in the us uk and australia until now little thought has been given to an intentional process to guide selection insertion and management of vascular access devices vads and by default actions are based on crisis management when a quickly selected vad fails the book details how vhp establishes a framework or pathway model for each step of the patient experience intentionally guiding improving and eliminating risk when possible the evidence points to the fact that reducing

fragmentation establishing a pathway and teaching the process to all stakeholders reduces complications with intravenous therapy improves efficiency and diminishes cost as such this book has become a strong point of reference appealing to vascular access specialists bedside nurses physicians and other health professionals few authoritative guides provide the depth and descriptive evidence included in this vhp model of care suitable for hospital administrators directors educators and others to apply within their services

nursing theories incorporates the latest theories and research methods in nursing today designed as a tool to help nurses apply concepts and theories to practice this book considers the ideas of well known nursing theorists and relates the work of each to the nursing process

an additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines this assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences and an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research provided by publisher
